STORY & CONCEPT

of CATRIS

STORY

In a cozy, brick-walled home lives a mischievous cat named Tetra. Tetra loves to climb and cause trouble by knocking things over. One day, blocks start falling from the sky, creating a pathway for Tetra to reach a **secret recipe** on the top shelf. As Tetra begins her climb, it's up to the player to clear the blocks and prevent her from reaching the top!

The player will learn new mechanics as they progress through the 3 levels and join Tetra on her journey to the secret recipe!

Prototype Title Screen Draft

Prototype of animation for falling cat

LEVELS

Level 1: Basic Catris Mechanics
Location: Living Room
Objective: Introduce basic Tetris mechanics.

Game Dynamics:

- Standard Tetris blocks (I, O, T, L, J, S, Z) fall slowly.
- Goal: Clear lines to prevent the stack from reaching the top and Tetra from climbing.

Storyline Context:

- Tetra starts her adventure by climbing the falling blocks in the living room.
- The player must clear the blocks to stop Tetra from getting higher.

Difficulty: Easy - Blocks fall slowly, giving ample time to clear lines.

LEVELS

Level 2: Increased Speed
Location: Hallway
Objective: Increase the speed of falling blocks.

Game Dynamics:

- Standard Tetris blocks (I, O, T, L, J, S, Z) fall at a moderate speed.
- **Goal:** Clear lines to manage the faster pace and prevent Tetra from climbing higher.

Storyline Context:

- As Tetra moves through the house, the blocks begin to fall faster, and some blocks slide horizontally, simulating moving obstacles.
- The player must act quicker to keep Tetra from climbing too high.

Difficulty: Medium - Faster falling blocks require quicker decision-making.

LEVELS

Level 3: Complex Block Patterns
Location: Kitchen
Objective: Introduce more complex block patterns.

Game Dynamics:

- Standard Tetris blocks (I, O, T, L, J, S, Z) with difficult patterns. More S and Z pieces.
- **Goal:** Clear lines while managing taller stacks and keeping Tetra from reaching the top.

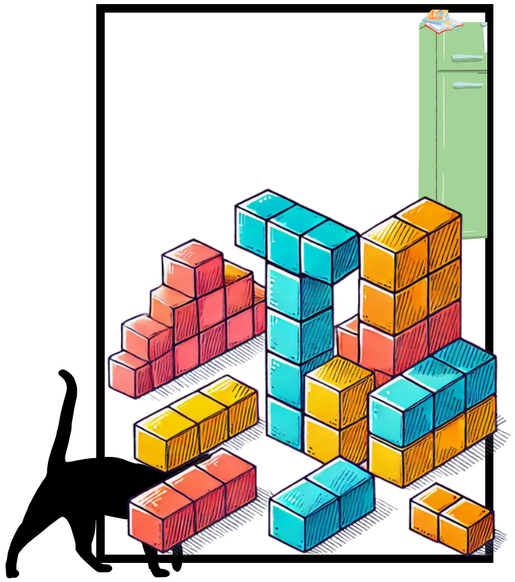

Storyline Context:

- Tetra climbs bookshelves and ledges, represented by vertical block patterns, making it easier for her to go up.
- The player must clear lines to keep the stacks from getting too high, making it harder for Tetra to reach the top.

Difficulty: Hard - Taller stacks create more pressure to clear lines efficiently.

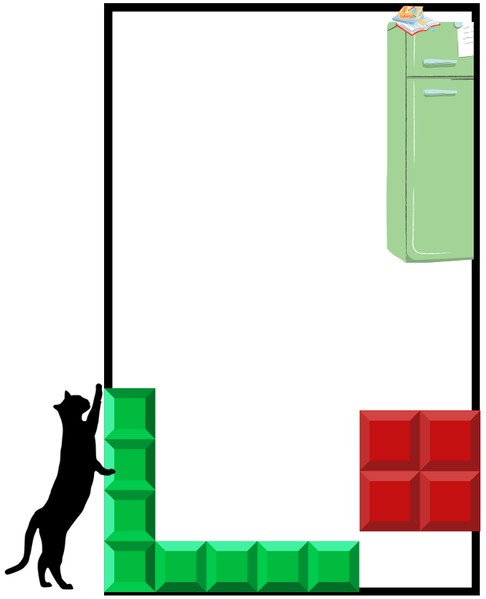

SIMPLE STORYBOARD PART 1

Intro Scene

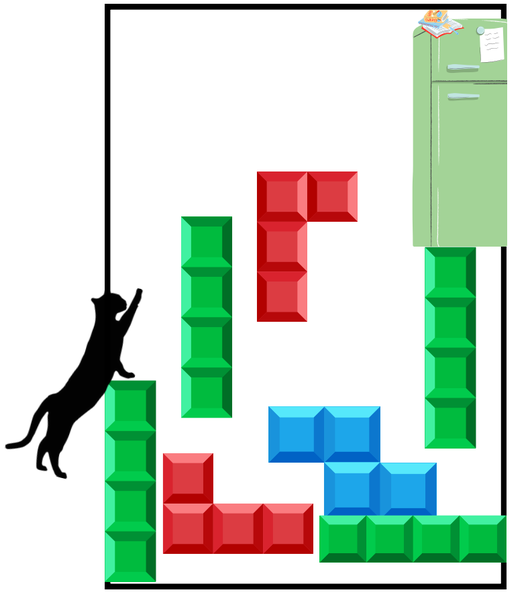

Shows Tetra discovering the falling blocks and the secret recipe on the top shelf. Tetra starts climbing as the blocks fall.

Level 1 Scene

Shows Tetra climbing through the living room. Introduce the basic mechanics of clearing blocks to stop her ascent.

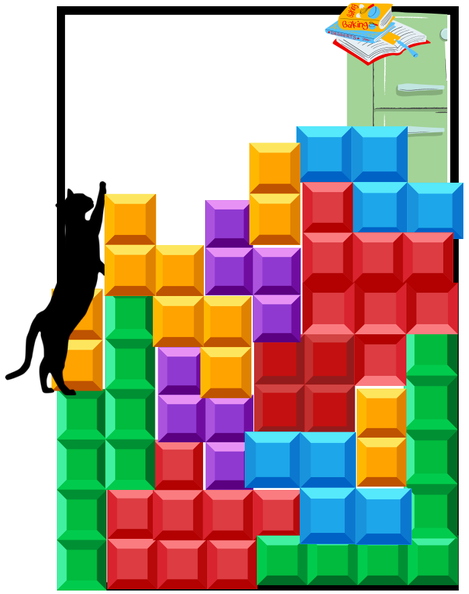

Level 2 Scene

Show Tetra climbing faster through the hallway, with blocks falling at a moderate speed and some sliding horizontally. The player must clear blocks faster.

SIMPLE STORYBOARD CONT...

Level 3 Scene

Shows Tetra climbing blocks in the kitchen, with large stacks of blocks appearing.

Ending Scene: Win

Conclude with Tetra being thwarted from reaching the top shelf. The player successfully keeps her from the secret recipe, and Tetra looks for her next adventure.

Upon Game Over

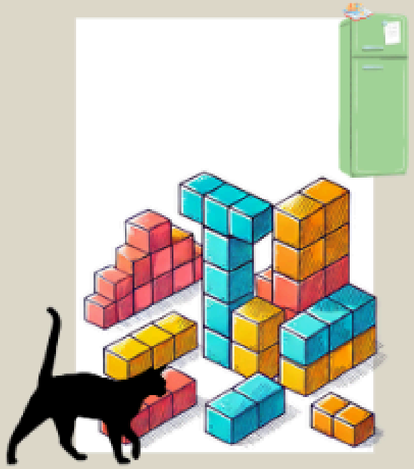

Failure Scene

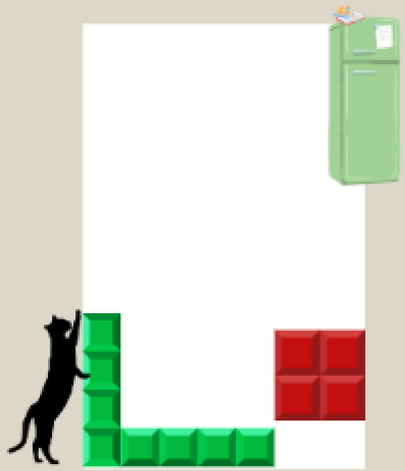

Shows Tetra smiling mischievously after getting her paws on the formula. Is it all over?

Level 3

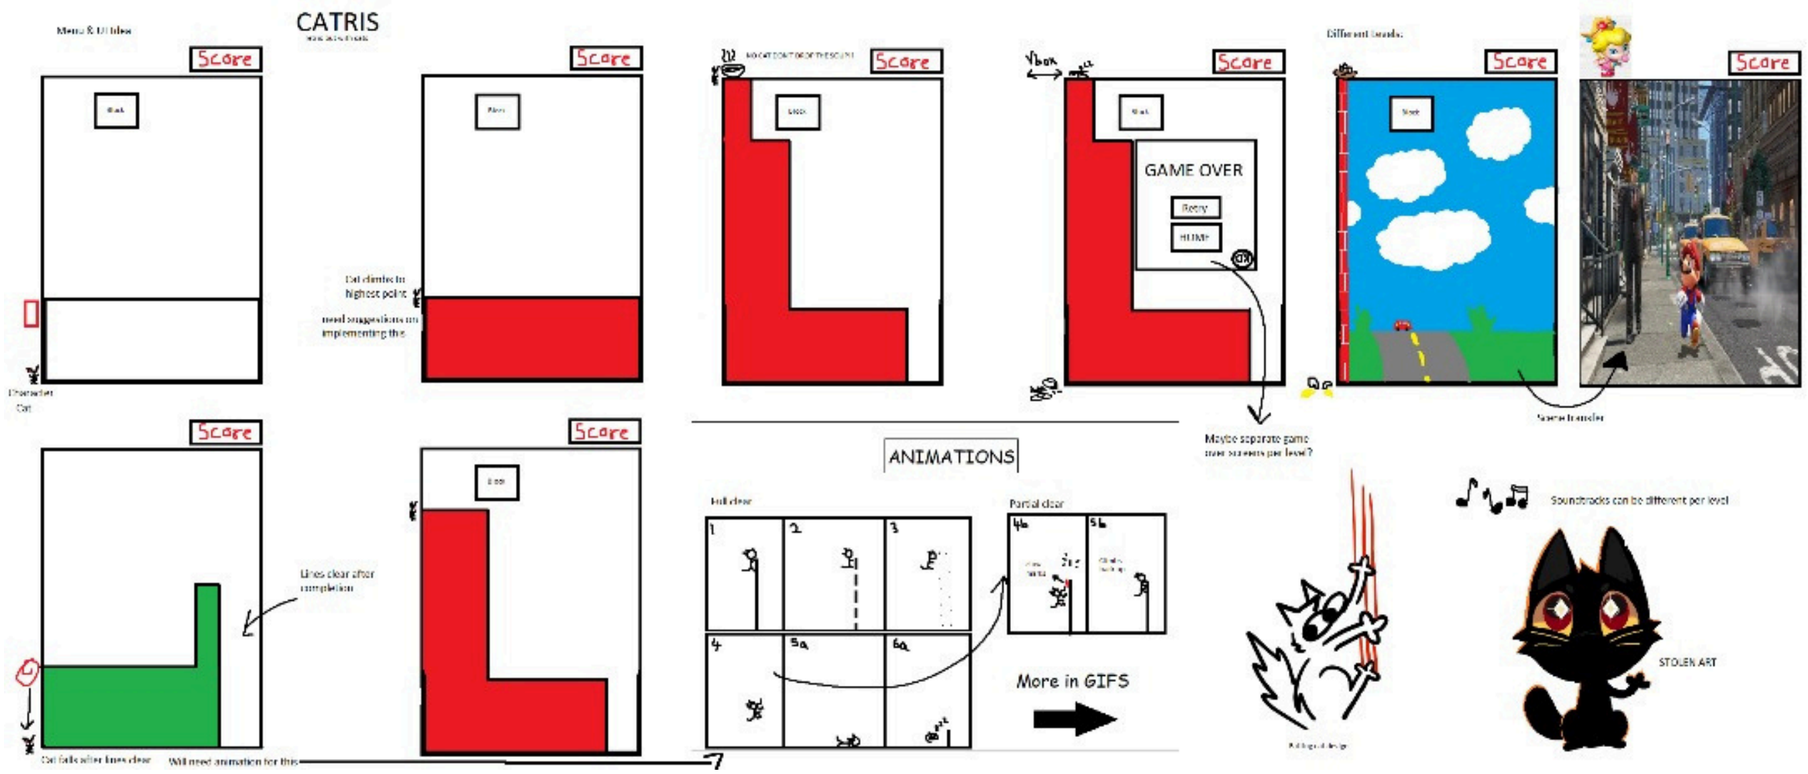

Possible different simple block designs for levels to keep visuals fresh.

UI DESIGN

of CATRIS

Rough design

This was the initial design of our game

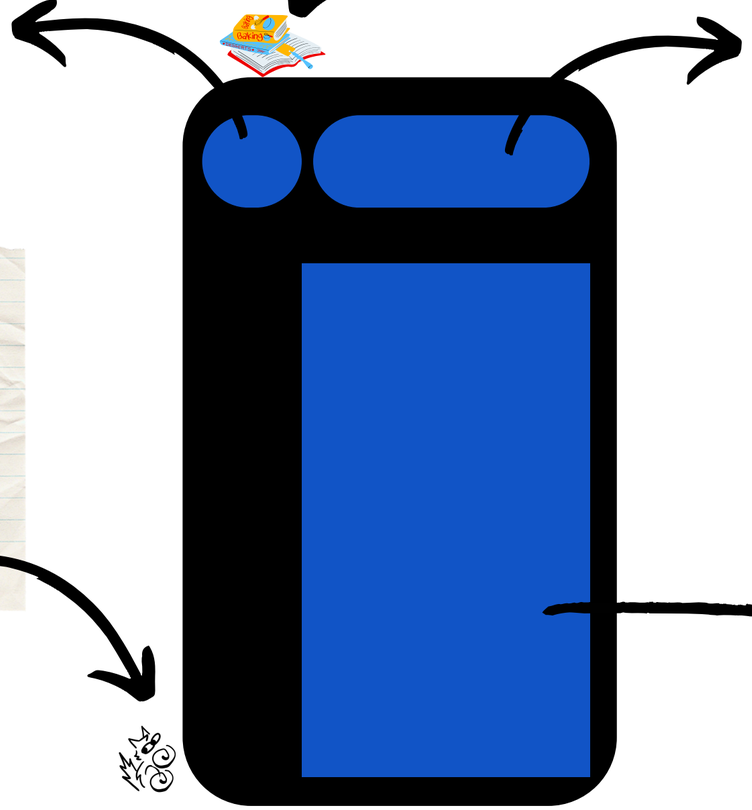

Initial Design

App simplicity

This shows the item that Tetra knocks over if the player fails the level

This shows the user what their next block is

This is the line tracker tells the user the amount of lines that needs to be cleared to complete the level

This is where Tetra the cat will be. She climbs according to the highest block available on the grid. When the grid is full of blocks, she climbs to the top

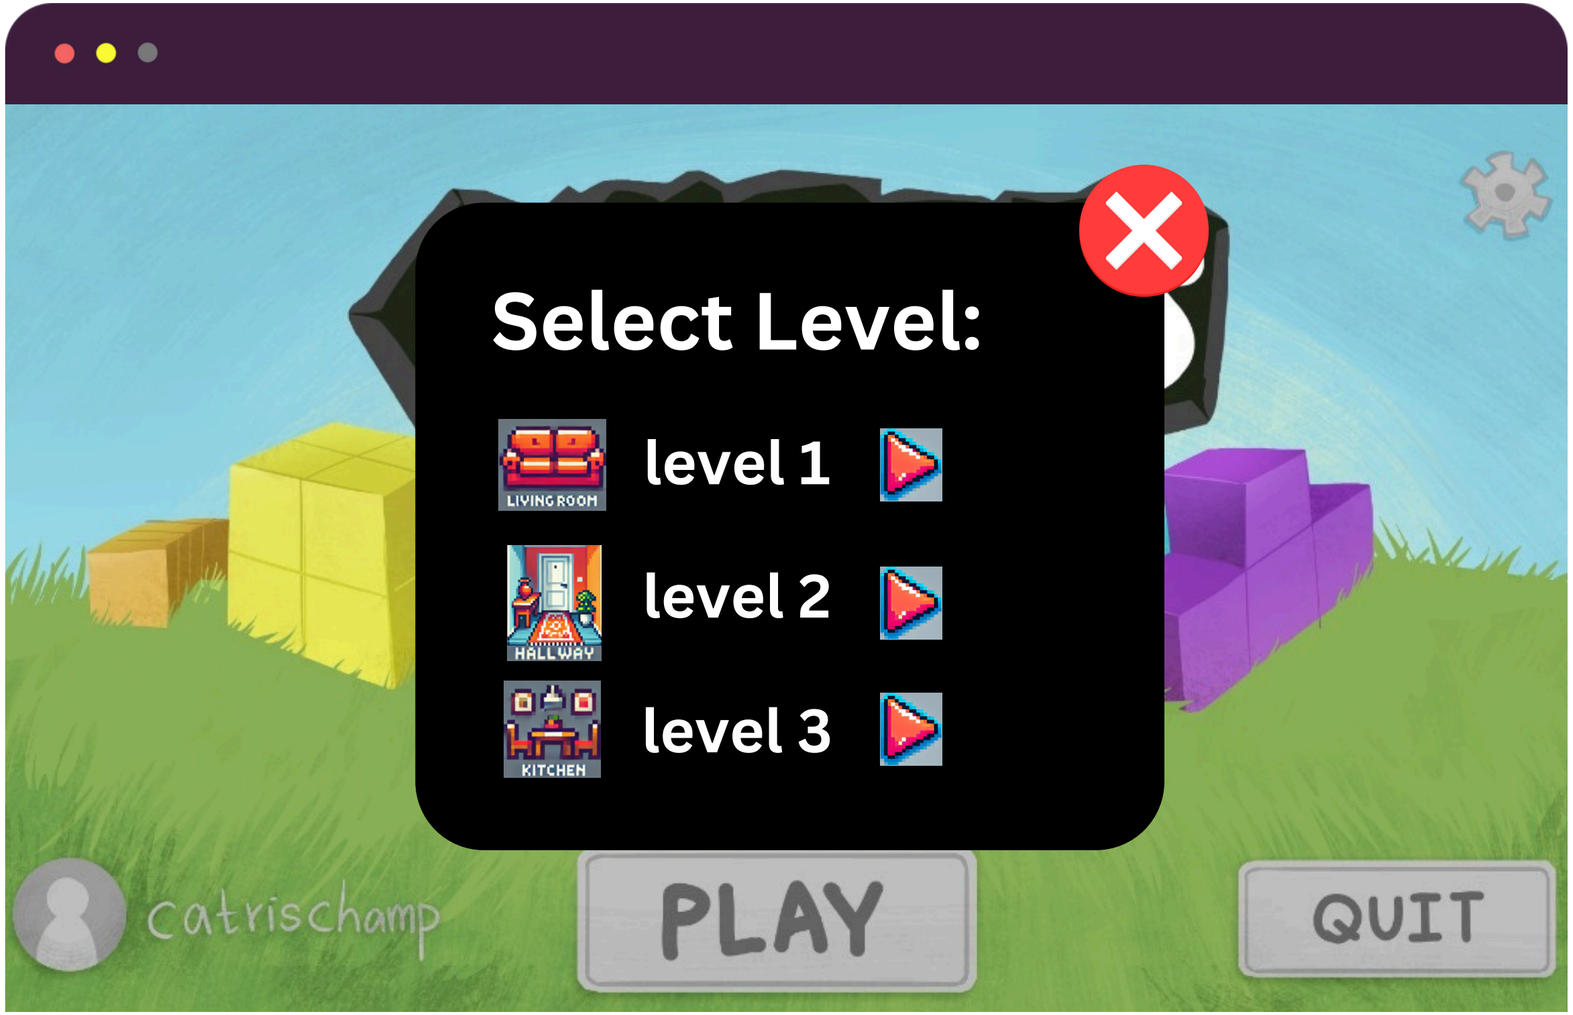

This is the play area of the game

The background will be changed according to the level to maintain a story

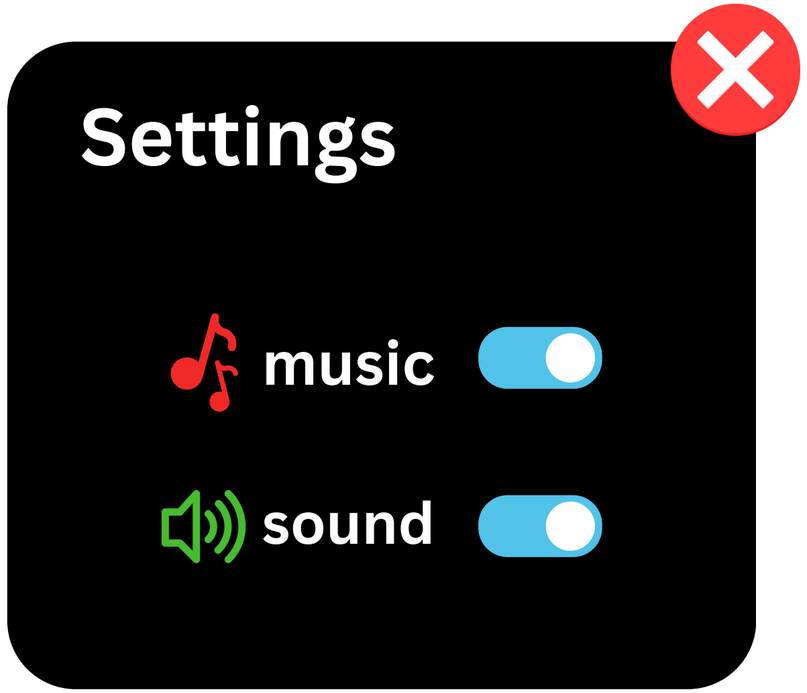

Main menu

Level Selection Pop-up

Settings page

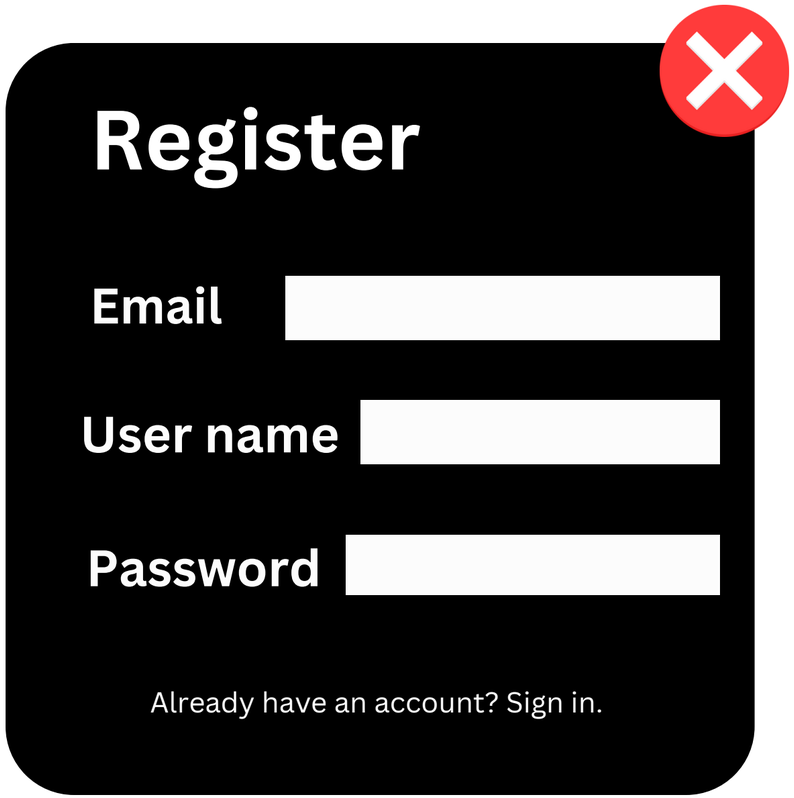

The basic settings a user will want to interact in the game

Account menu

This is where the user will log into their account

Where a user will make an account to play the game

Game levels

LEVEL 1

This level was based on a living room

Game levels

LEVEL 2

In this level we based the level in a hall way.

Game levels

LEVEL 3

We based this in level in the kichen

WIN & LOSS POP-UPS

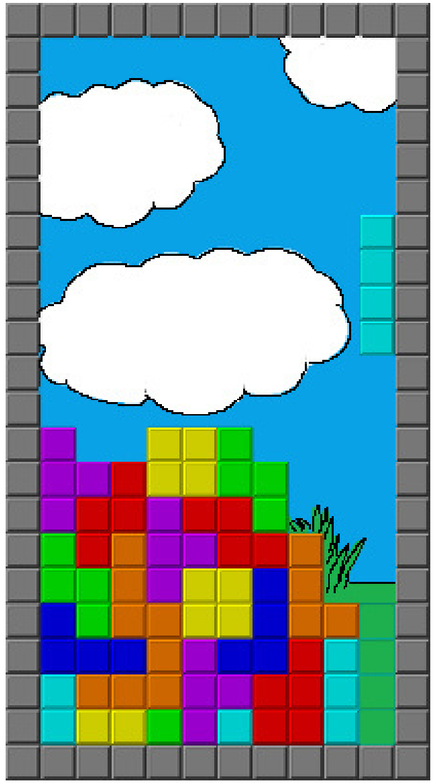

GAME MECHANICS

of CATRIS

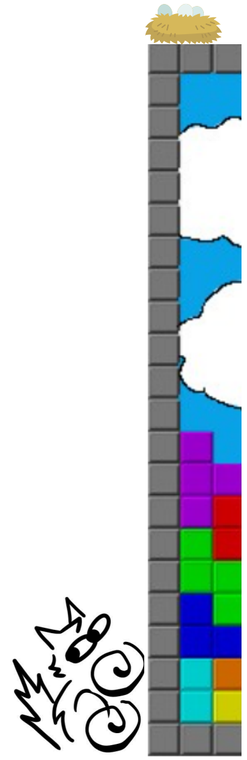

GRID

Scrapped prototype of grid. Inner colors are too distracting during gameplay

This Grid is your play area. The falling blocks are helping it climb to the top!

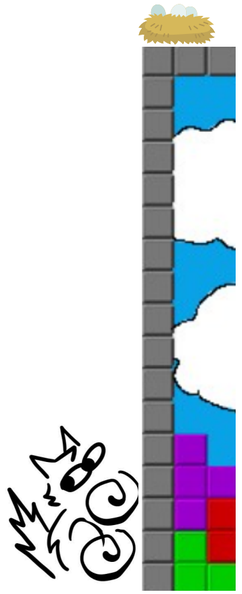

GRIDWALL

Simple cat climbing animation draft

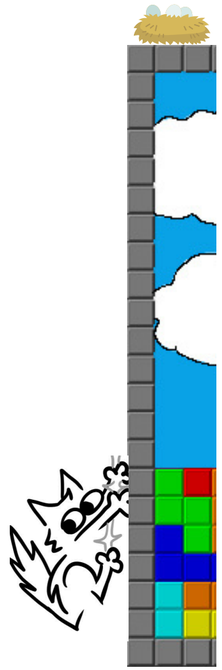

The cat wants to climb up the Grid Wall and knock over the delicate object at the top!

STOP THE CAT?

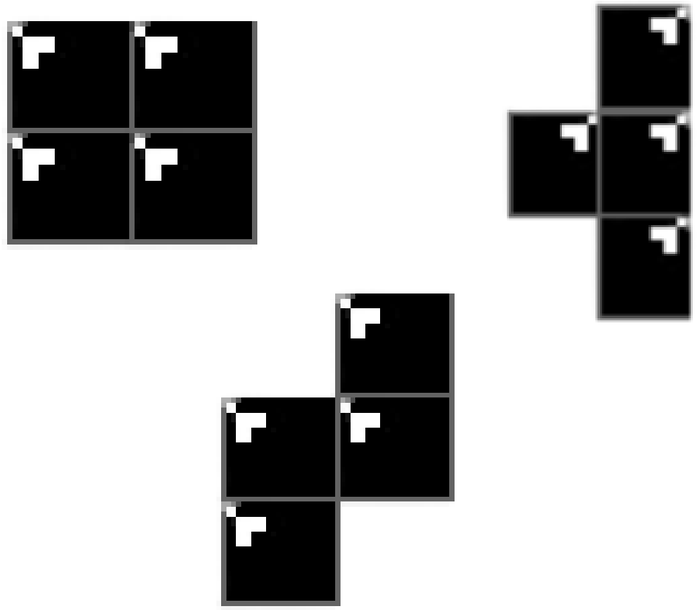

The cat climbs to the highest piece on the grid.
Your goal is to stop the cat from knocking over the delicate item!

CLEARING LINES

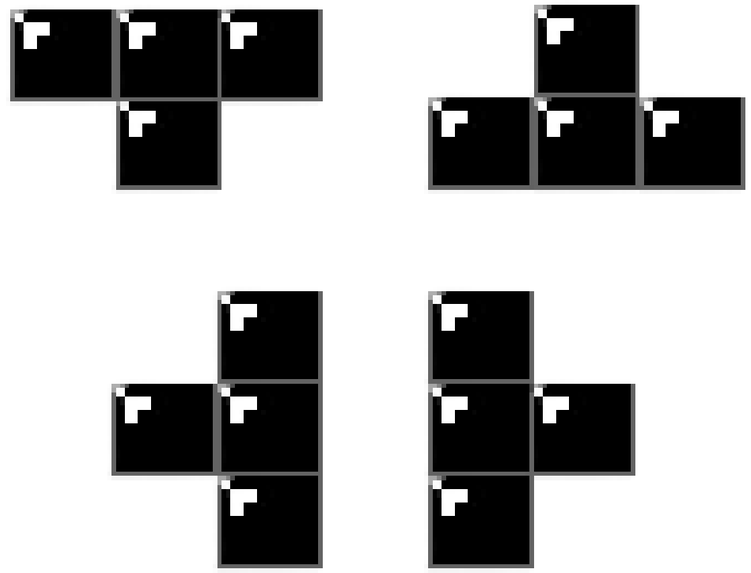

Completely filling the horizontal lines with pieces clears the line away! Making the cat fall down to the next highest block.

PIECES

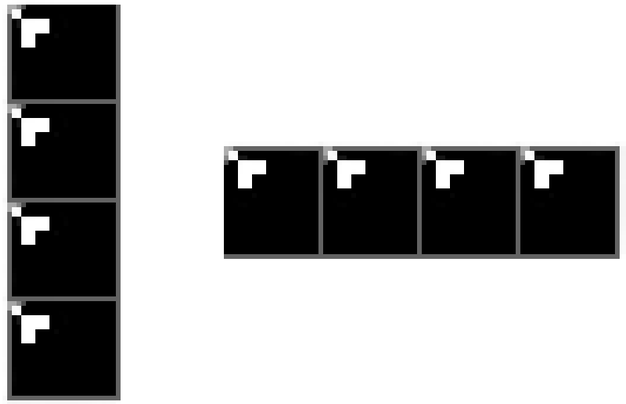

You must use 7 types of pieces to clear lines. The next piece will be chosen randomly after the current piece is placed.

T PIECE

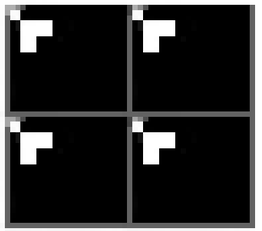

The most flexible piece in Catris! The T-Piece can fit in almost any nook and cranny, letting you clear those pesky one-block holes.

I PIECE

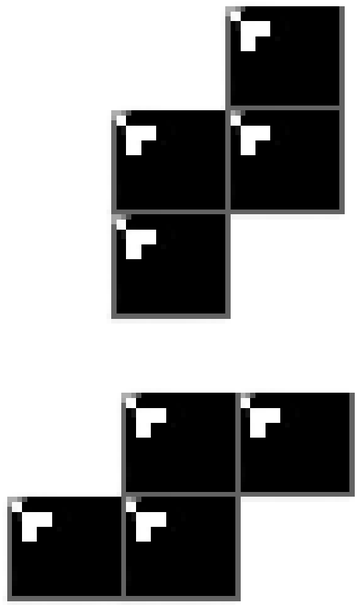

The most important piece in Catris. The I-Piece can fill in large wells to clear 4 lines at once!

O PIECE

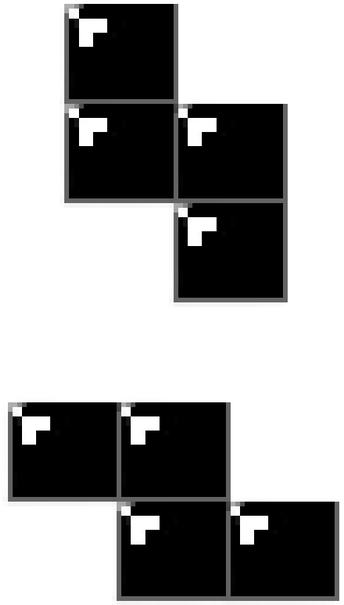

The convenient O-piece helps fill the board while still keeping room for the other pieces.

S PIECE

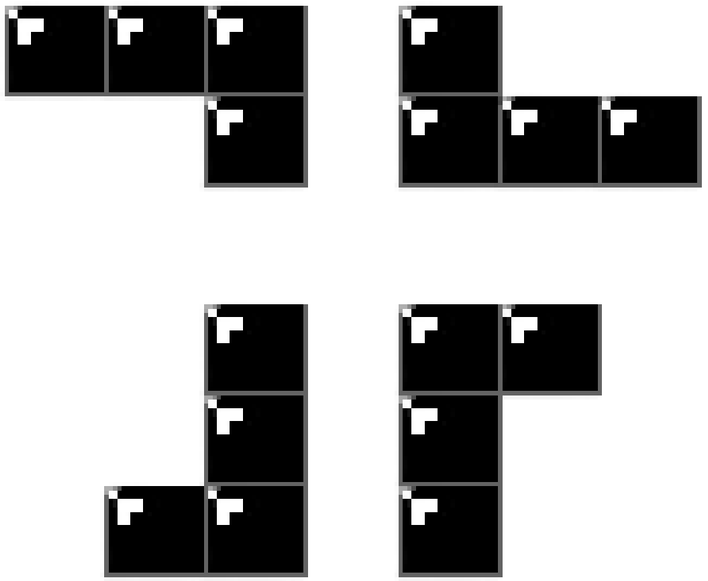

The S-Piece is one of the trickier pieces to place. But mastering its placement can allow for some surprising line clears!

Z PIECE

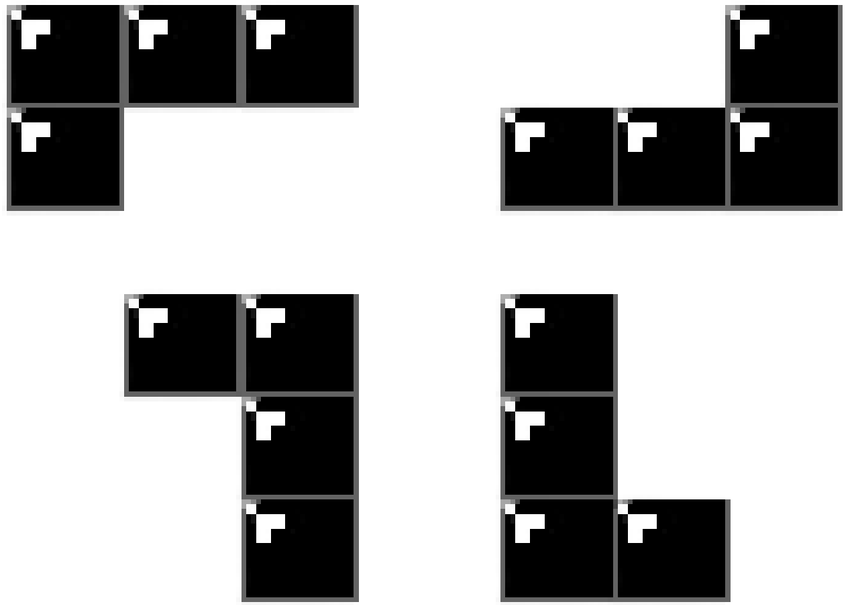

The Z-Piece is similar to its S-Piece counterpart. However, they do not go together. Weave in some Z-Pieces where S-Pieces won't fit!

J PIECE

The J-Piece is great for setting up other pieces. It can help create space for other blocks to fall into.

L PIECE

The L-Piece allows for flexibility where J-Pieces won't fit. L-Pieces can be used together with J-Pieces to cover a large amount of space.

Sample game over screen without buttons

If the blocks reach the top of the grid, it’s game over!

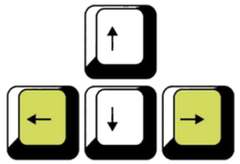

WIN CONDITION

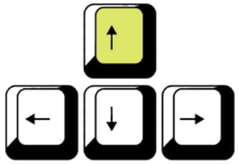

placeholder catnap animation

Each line you clear will tire out the cat. Once you clear a certain amount of lines, the cat will give up and take a catnap.

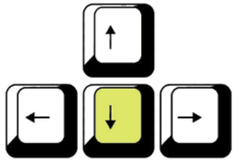

CONTROLS

Use the left and right arrow keys to move pieces

Use the up arrow key to rotate pieces

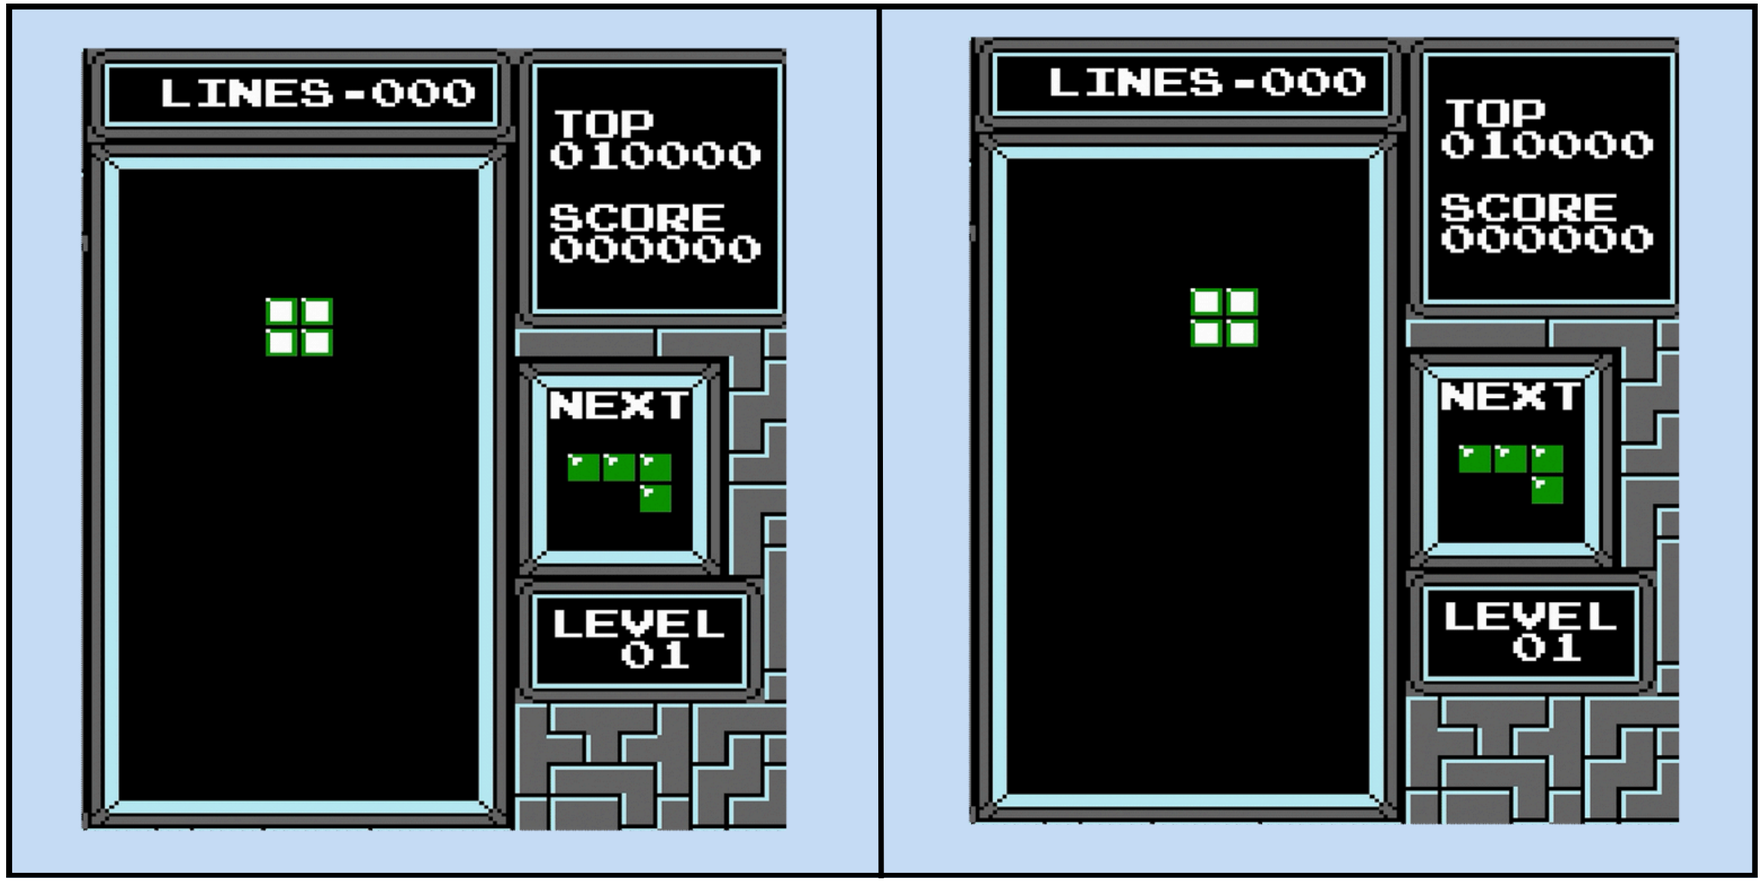

Use the down arrow key to make pieces drop faster

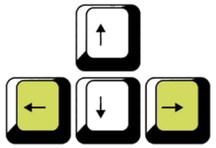

Use the spacebar to instantly drop the current piece down

MOVE PIECES

*gameplay images taken from NES Tetris

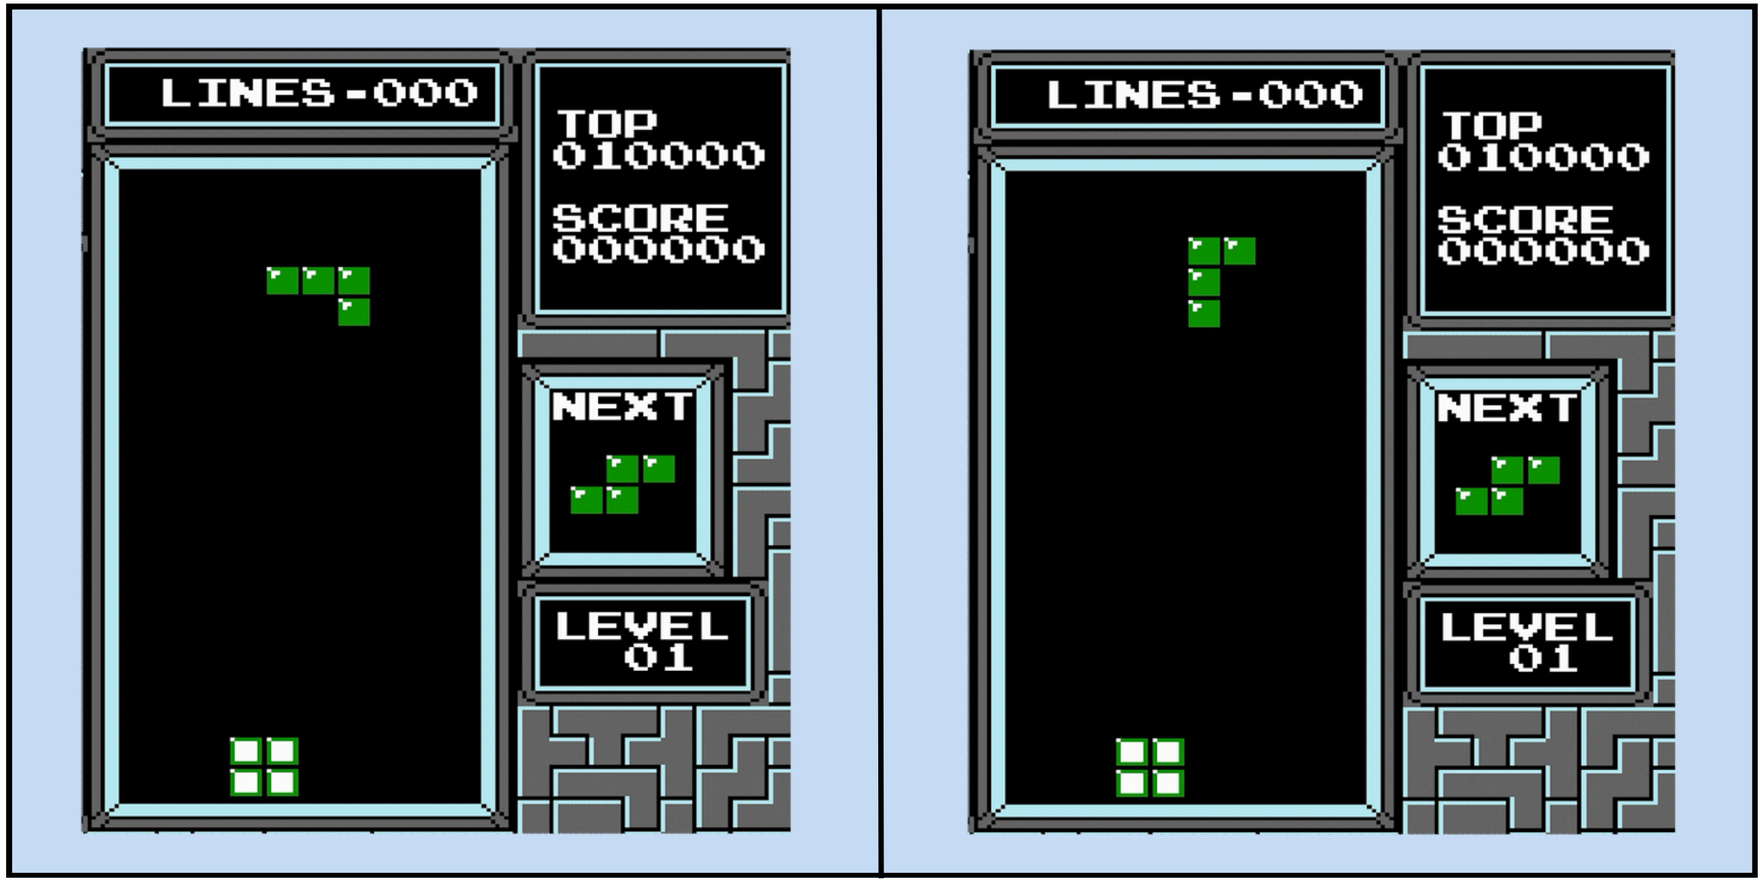

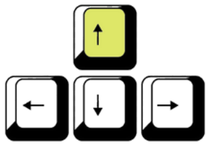

Use the left and right arrow keys to move pieces

ROTATE PIECES

*gameplay images taken from NES Tetris

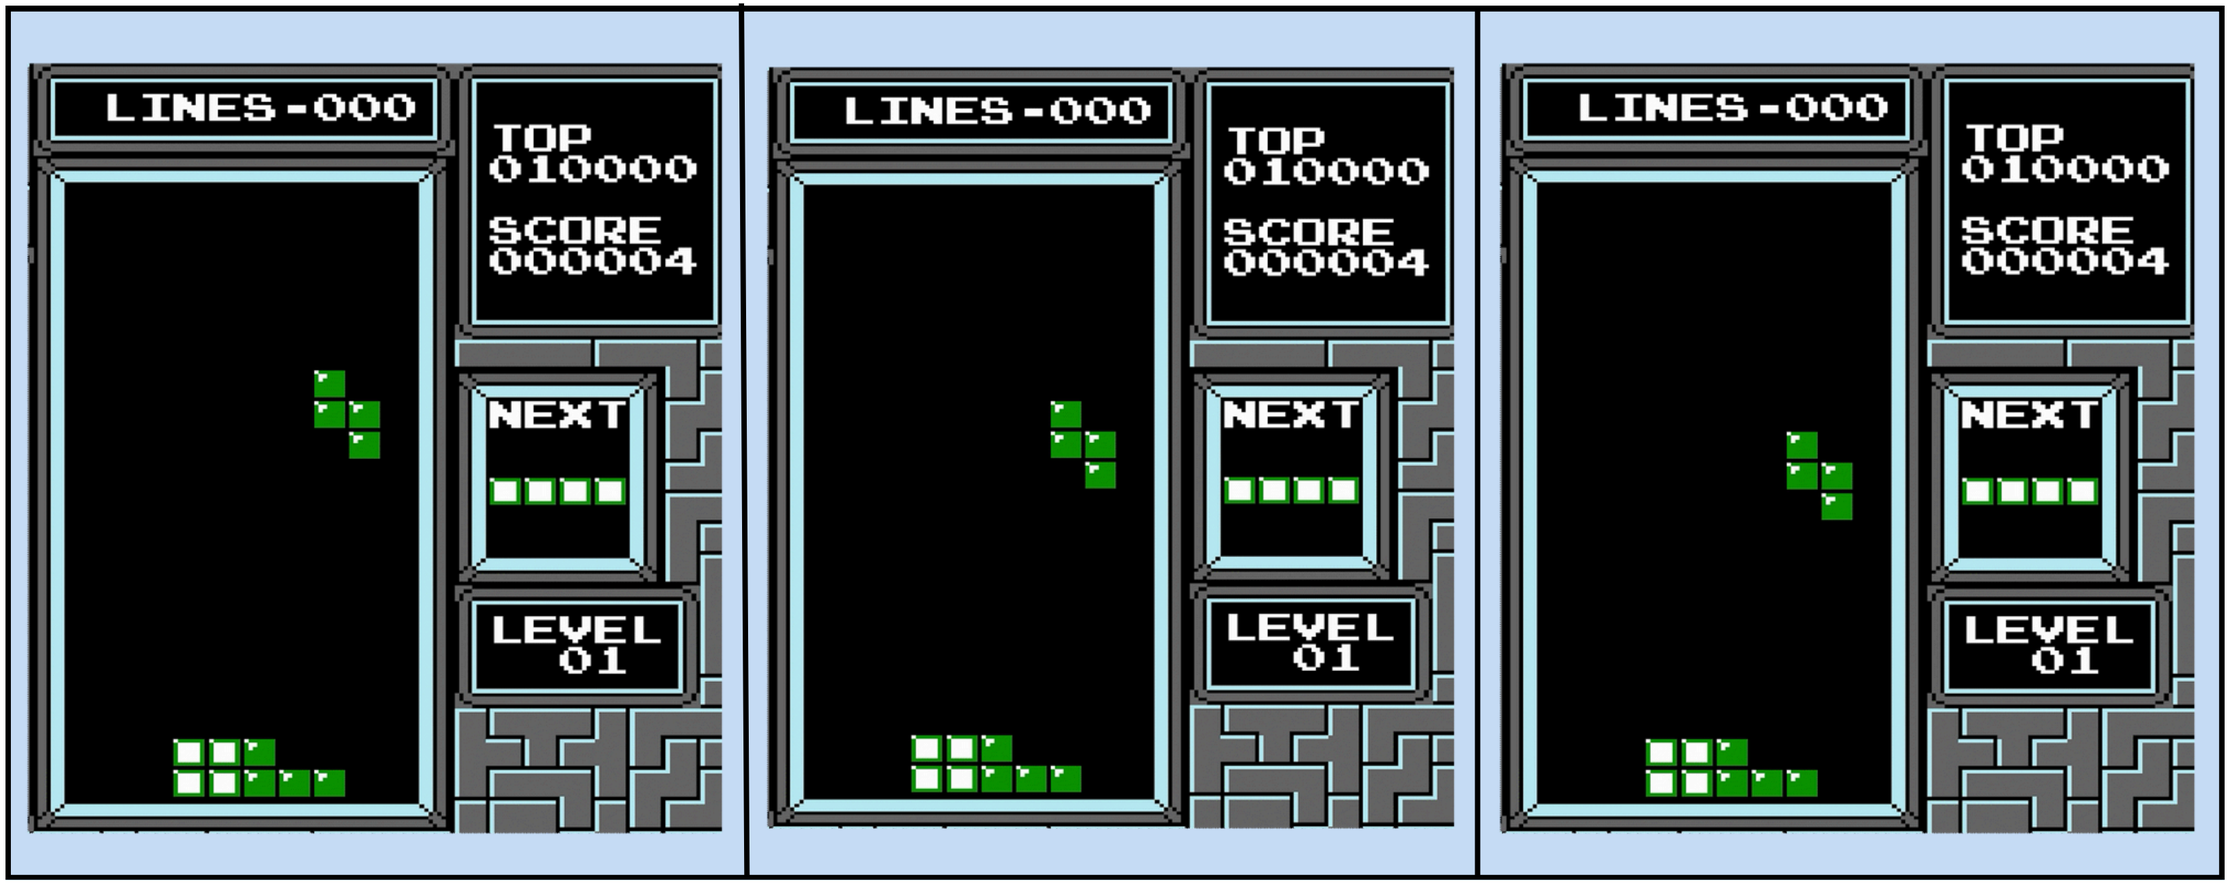

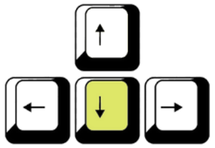

Use the up arrow key to rotate pieces

*gameplay images taken from NES Tetris

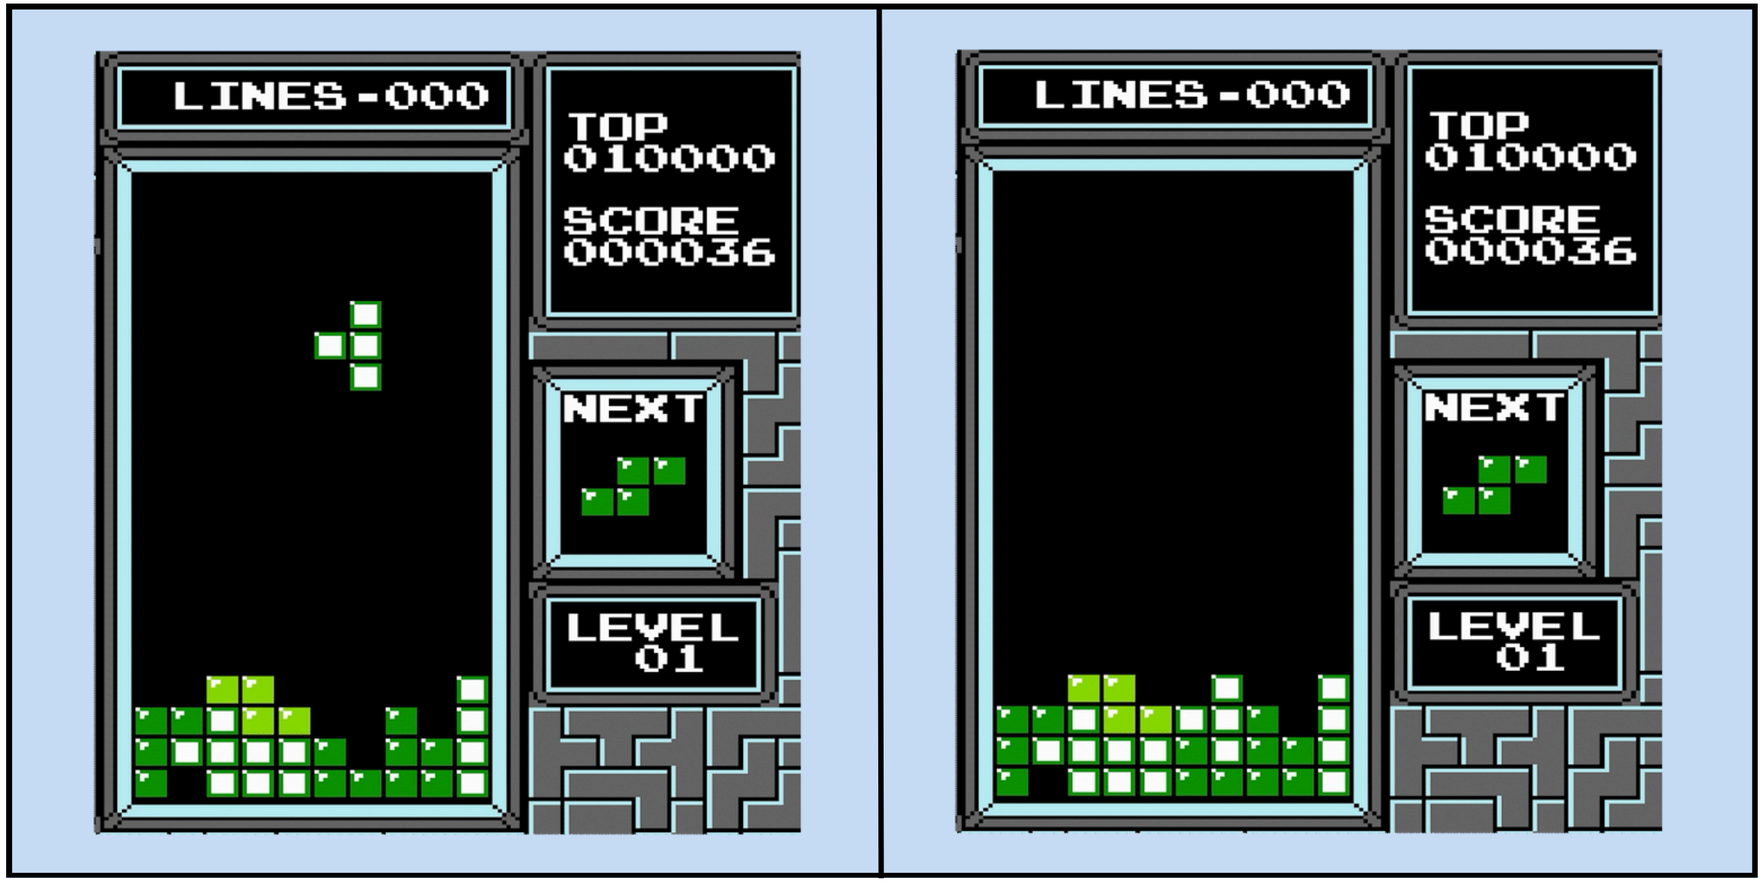

SOFT DROP

Use the down arrow key to speed up the falling piece

HARD DROP

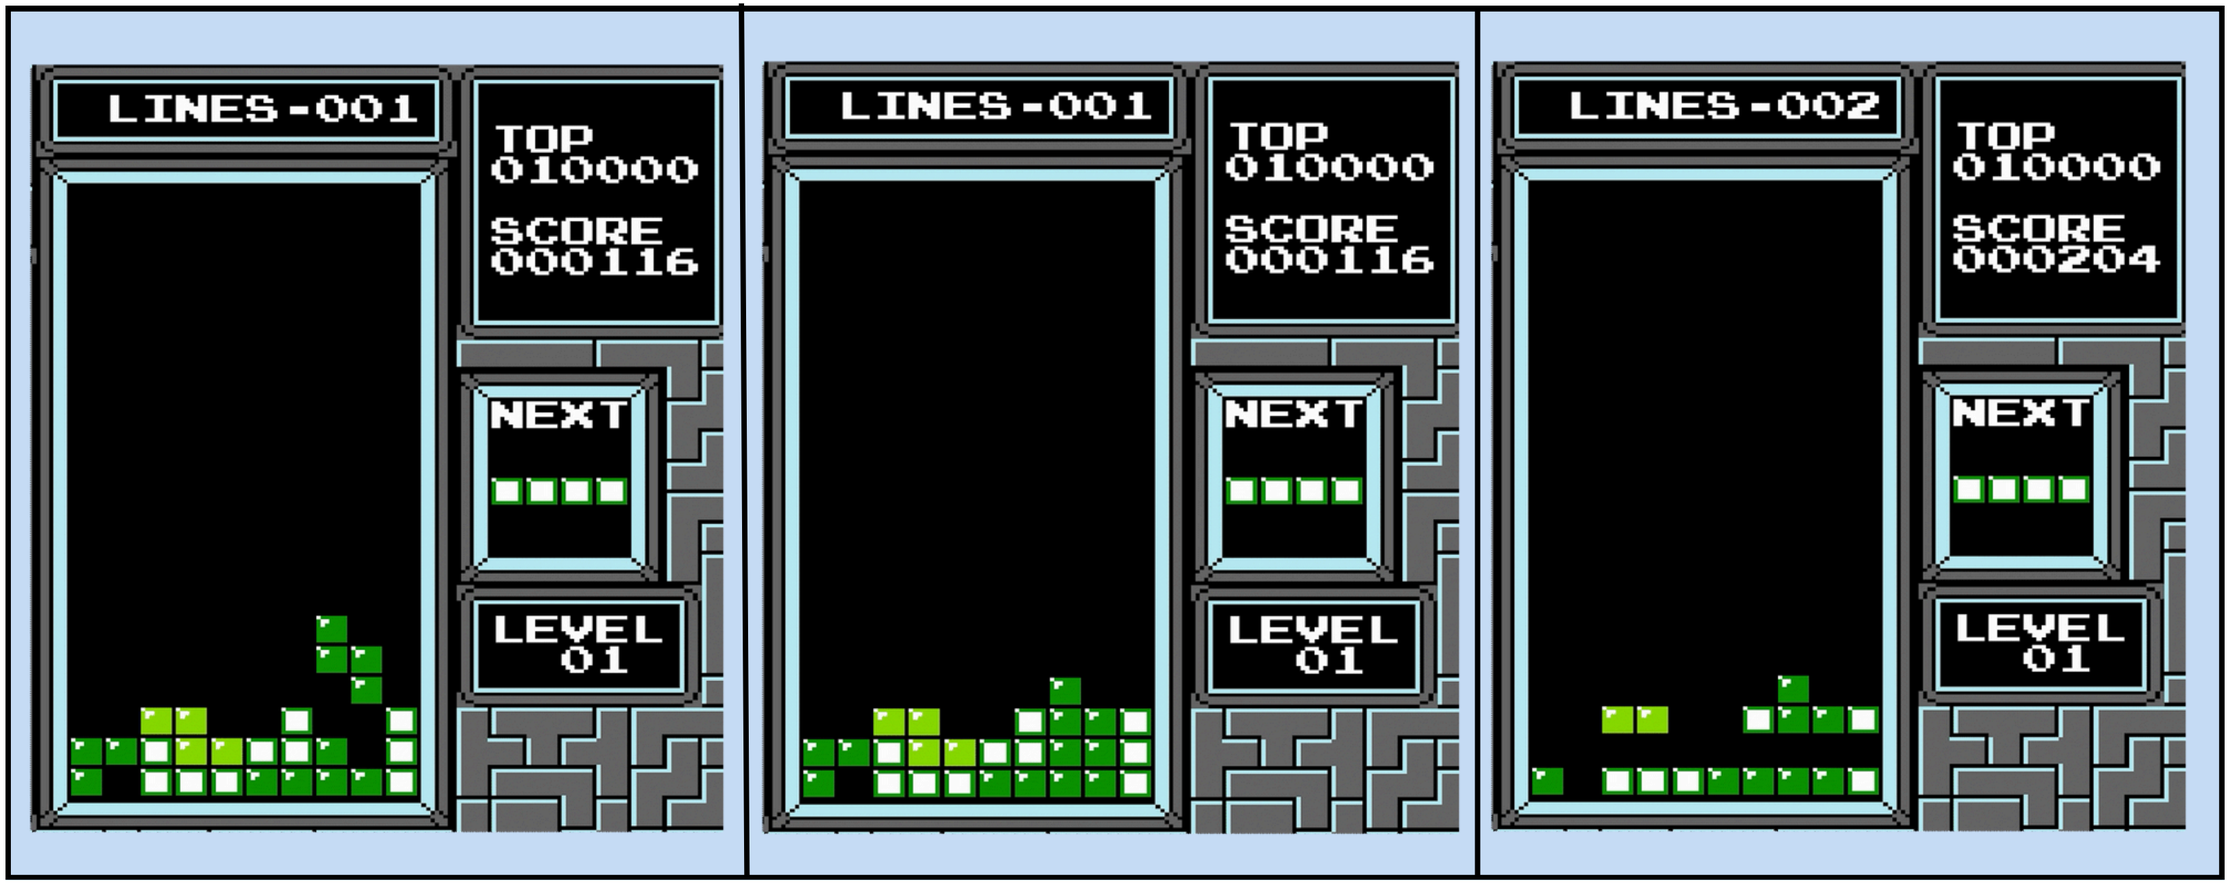

*gameplay images taken from NES Tetris

Space

Use the spacebar to instantly drop the current piece down

*gameplay images taken from NES Tetris

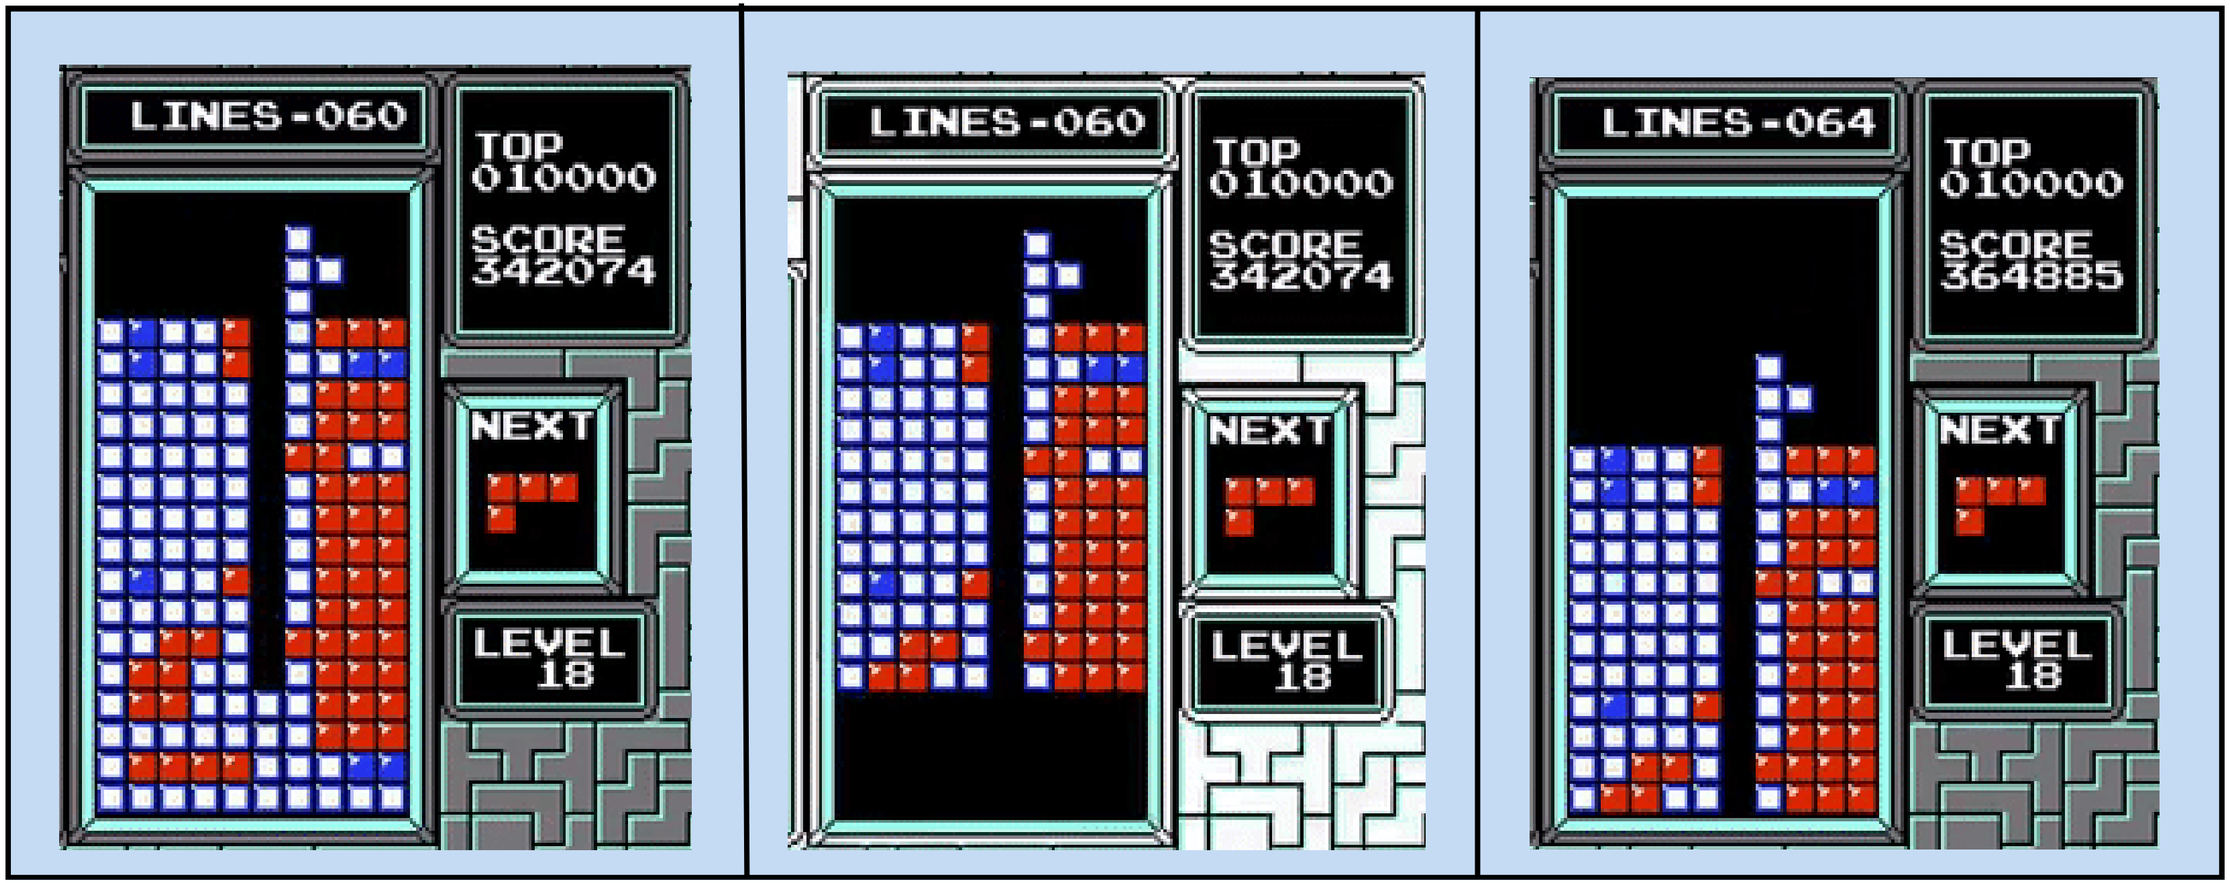

LINE CLEAR

Use these 7 pieces and your wits to clear lines and reach the goal!

*gameplay images taken from NES Tetris

CATRIS

Try to clear 4 lines at once! This is known as a Tetris!
